

Novetta is an advanced analytics company that bridges the gap between what our clients currently can do and what they aspire to achieve by solving complex problems.

WHO IS NOVETTA?

Novetta is an advanced analytics company that bridges the gap between what our clients currently can do and what they aspire to achieve by solving complex problems. We do this by helping our clients find clarity from complexity in dealing with massive disparate data sets that were never intended to be analyzed together. By mastering scale and speed our advanced analytics solutions deliver the actionable insights needed to help our customers detect threat and fraud, protect high value networks and improve the bottom line.

OUR FOCUS

Novetta has product and solution offerings for both Government agencies and Commercial enterprises in four main areas:

Data Analytics – we help our customers uncover hidden insights buried in massive amounts of structured and unstructured data at speed. Our entity analytics offering runs natively on Hadoop, and we excel when clients need to cross-query and explore large disparate data sets that were never intended to be analyzed together.

Cyber Analytics – we create a comprehensive, coherent picture from network communications and external threat and enrichment data to make security teams dramatically more effective at combating advanced threats. We help ‘network hunters’ operate much faster to significantly increase the likelihood of discovering hostile actors operating malware on a network.

Open Source/Media Analytics - we help customers extract, manage and understand data from social networks, public websites and traditional media sources, and thereby tie insights from these varied sources together. This emerging area of analytics allows organizations to view problem sets from a new perspective and understand trends in sentiment and influence.

Multi-Int Analytics - our solutions support the tasking of sensor platforms and directing the collection and exploitation of the data they produce. That data and associated products are shared in real-time between platforms or tactical nodes fed into a global network to provide operators and analysts real-time visualization, exploitation and forensic tools using a common web-browser.

Novetta Mission Analytics

OUR HERITAGE

Novetta has deep roots supporting the US government's national security mission with a heritage that includes more than 25 years of real-world success in big data. Novetta has a history of providing mission-critical solutions to national security customers and the intelligence community in areas such as biometrics, digital forensics, discovery analytics, geospatial intelligence, social networks, etc.

WHAT MAKES NOVETTA DIFFERENT?

Great people. Missions that matter. We have super smart technologists from a broad spectrum of disciplines who employ fresh approaches to solve some of the most difficult challenges organizations face.

Advanced analytics at speed and scale. We work with some of the world's largest data sets for customers who demand security and speed, measured in billions and seconds rather than millions and minutes.

Disruptive. Our technologies and solutions are often disruptive in that they solve particularly tough problems not addressed by other enterprise offerings. In our labs we are working on cool areas of analytics like rich media indexing and cloud based data fusion.

Employee Focused. We value our over 750 employees and demonstrate our commitment to them by providing outstanding benefits, career leadership and development, and opportunities to work on challenges of national significance.
