

Let us do the heavy lifting.

Novetta Managed Analytic Services provides Big Data capabilities without a big price tag, allowing our customers to accelerate their transition to being truly data-driven. With our Managed Analytic Services, you get access to decades of data science and engineering expertise and world-class tools such as Novetta Entity Analytics and Novetta Mission Analytics - all managed and hosted in our secure AWS environment and overseen by our staff of AWS Certified engineers and developers.

DATA ←————→ INSIGHTS

MANAGED ANALYTIC SERVICES

- Data discovery, acquisition, inspection, and ingest.
- Data is combined and cleansed for entity-centric analysis using our proprietary Novetta Entity Analytics entity resolution engine.
- Data is indexed and stored into the visual analytic suite of your choice, including Novetta's own analytic platform DataViser.

WHO CAN BENEFIT?

SMALL BUSINESS

Are you looking to make your business more data-driven? Do you find dealing with data distracts from your core focus? Our Managed Analytic Services levels the competitive playing field by providing you with data science and engineering expertise previously reserved for only the largest firms. Ask us how we've helped jumpstart companies like yours!

ENTERPRISE

Are you disappointed with your data analytics investments to date? Are the results too slow and too costly? Thousands of enterprise customers are moving their Big Data workloads to AWS. Our Managed Analytic Services will help you accelerate your ROI and get the most out of your existing analytic investments.

PUBLIC SECTOR

The cloud is a game-changer for public sector agencies that now have access to Big Data infrastructure at a fraction of the cost of hardware. However, many agencies lack the in-house expertise required to manage, process, and exploit Big Data. Try our Managed Analytic Services on a pilot basis and start seeing how Big Data can transform your agency and enable your mission.

THE ADVANTAGES

Reduced Up-Front Costs

Exploiting Big Data generally has very high up-front costs, and demands a considerable investment in training or personnel. Though the cloud substantially reduces hardware/infrastructure costs, budgeting for the required expertise remains a concern for many. Novetta Managed Analytic Services significantly reduces up-front costs and removes the need to build in-house data science expertise; allowing you to focus on using data instead of dealing with data.

Early ROI Analysis

You can make very significant investments in Big Data, expect to have months of lead time and still be left with results that do not justify the investment. Novetta Managed Analytic Services provides very early results with minimal up-front cost to support early reinvestment decisions...if ROI is worthwhile, continue; if not, cancel.

Mission Focus

Data science/engineering are not core business functions for most enterprises. Novetta Managed Analytic Services allows you to maintain focus on your core business while we manage your Big Data exploitation.

Improved Security

Enterprises (government and commercial alike) face a barrage of security threats every day and have to invest increasingly large amounts of money to secure their data. With Managed Analytic Services, Novetta assumes the burden of securing your data, using techniques honed from 20+ years supporting the Intelligence Community and our experience as an AWS Advanced Tier partner.

Surge Capacity

Many organizations may not have the need for "always on" data analytics, but, instead, need to perform analytics or visualization on a scheduled basis, in advance of or in response to certain events such as large event support or disaster response. Novetta Managed Analytic Services is there for you when that happens and when you need it.

PAY-AS-YOU-GO PRICING

Novetta Managed Analytic Services pricing model allows you to get started leveraging Big Data at a fraction of the cost of building this expertise in-house. You pay for results, not promises.

Data

The data component of our pricing is based upon 4 key factors: size, complexity, reusability, and update frequency. We work with our customers to assess data needs and develop pricing options that best support their business.

Hosted Analytics (Dataviser, Splunk, etc.)

For a truly turnkey solution, Novetta offers hosted analytics solutions (DataViser, Splunk, Kibana, Redshift, Quicksight). We also provide data export and analytics tool integration for customers who already own and host analytic platforms they wish to leverage.
